
BUILD-X

Event Name: BUILD-X(Engineer's Day 2026)

Date: 15-09-2026

Time: 12:20 PM – 2:20 PM

Venue: Honesty Block, CSE Labs

Organized by: IEEE Student Branch, VVITU

Introduction:

The IEEE Student Branch of VVITU proudly organized **BUILD-X** as part of the **Engineer's Day 2026 celebrations** on **15th September 2026** within the college campus. The event was designed as a rapid engineering challenge to encourage students to apply their technical knowledge to real-world problems. Participants worked in teams to develop innovative and practical solutions within a limited time, enhancing their problem-solving, creativity, teamwork, and technical skills. Through this initiative, the IEEE Student Branch aimed to promote innovation, collaboration, and practical engineering among students.

About IEEE:

The Institute of Electrical and Electronics Engineers (IEEE) is the world's largest technical professional organization dedicated to advancing technology for the benefit of humanity. It provides a global platform for students and professionals to develop technical expertise, leadership qualities, and collaborative research opportunities, connecting innovators worldwide and empowering members to grow academically, professionally, and personally. The IEEE Student Branch of VVITU serves as a vibrant student-led organization that bridges academic learning with real-world experience. It offers members opportunities to participate in workshops, technical sessions, hackathons, and community outreach programs.

Event Overview

As part of the Engineers' Day 2026 celebrations, the IEEE Student Branch of VVITU organized "BUILD-X" on September 15, 2026, at the Honesty Block, CSE Labs, VVITU. BUILD-X was a 120-minute rapid engineering challenge that encouraged students to transform real-world problems into innovative solutions. The event promoted creativity, analytical thinking, teamwork, and practical problem-solving among participants.

Objectives

To celebrate Engineers' Day by promoting the spirit of innovation and practical engineering.

To encourage teamwork, creativity, and analytical thinking among students from diverse disciplines.

To provide an interactive platform for students to develop innovative solutions to real-world problems while enhancing their technical and communication skills.

The Challenge – BUILD-X

BUILD-X was conducted as a time-bound engineering challenge in which participating teams received a real-world problem statement.

The teams were required to work through four stages:

- 1. Think** – Understand the problem and identify the key requirements.
- 2. Design** – Brainstorm ideas and develop a suitable solution approach.
- 3. Build** – Create and refine the proposed solution within the available time.
- 4. Present** – Present the solution and explain its working, innovation, and practical relevance.

The entire challenge was completed within 120 minutes, encouraging teams to make effective decisions, manage time efficiently, and work collaboratively.

Domains

The challenge focused on three emerging technical domains:

Artificial Intelligence (AI):

Problems involving intelligent systems, automation, machine learning, data-driven solutions, and AI-based applications.

MedTech:

Problems related to healthcare, medical technology, patient support, accessibility, monitoring, and technology-enabled healthcare solutions.

Cybersecurity:

Problems involving digital security, privacy, data protection, secure systems, cyber threats, and responsible technology use.

Participation

Team Size: 2–4 Members

Eligible Participants: 2nd & 3rd Year Students

Duration: 120 Minutes

Conclusion:

BUILD-X successfully captured the spirit of Engineers' Day by providing students with a practical platform to think creatively, solve real-world problems, and transform ideas into innovative solutions. The 120-minute challenge encouraged participants to work collaboratively, manage time effectively, apply technical knowledge, and communicate their ideas with confidence. By bringing together students from different branches and introducing them to domains such as AI, MedTech, and Cybersecurity, the event promoted an environment of innovation and interdisciplinary learning.

The IEEE Student Branch of VVITU expresses its appreciation to all participants, faculty coordinators, volunteers, and organizing members whose efforts contributed to the successful conduct of BUILD-X
